- The patient can be enrolled over the telephone or in person
- The patient receives initial services (CBE/Pap) at place of enrollment

Points to Remember

- Appropriate follow-up for client with abnormal CBE
- Breast ultrasound and diagnostic mammogram must be ordered in the presence of a palpable mass
- What constitutes benign ultrasound finding
- Timeliness and completeness of data impacts patient quality of care

- Referral Process to Medicaid Case Managers

– Fax to 501-661-2009

- Pathology report
- Diagnosis Verification and Treatment (DVT) form

MEDICAID

- Case management for treatment plan compliance
- Annual Verification and Treatment (AVT) Form
 - Meet eligibility requirements
 - Currently receiving treatment
 - Reconstruction
 - Chemotherapy
 - Radiation
 - Surgery
 - Oral Hormonal therapy

- Covers treatment for breast cancer or cervical cancer/ pre-cancer diagnoses
- Ends when treatment is complete or when client is no longer seeking treatment
- Referrals must have pathology (tissue biopsy) diagnosed breast cancer, cervical cancer/pre cancer \geq CIN II

Points to Remember

- BreastCare patients and non-BreastCare patients
- Eligibility
- Timeliness of treatment

DATA MANAGEMENT

MDEs-How are we doing?

- Traditionally, Arkansas has met and oftentimes exceeded standards in many areas of the MDE
- Success is attributable to many including program staff, regional care coordinators, and of course providers
- Always looking for ways to improve

Why is data important?

- BreastCare is required to submit data bi-annually to the CDC in form of Minimum Data Elements (MDE)
- Completeness, accuracy and timeliness of the data is important to the MDE
- BreastCare federal funding is based in part on meeting MDE performance indicators
- MDE numbers limited- complete numbers on BreastCare website under Publications- quarterly and annual reports

Selected October 2012 MDE Results

- 43.7% of initial pap tests were provided to women who were rarely or never screened ($\geq 20\%$)
- 100% of abnormal cervical screenings had complete follow-up ($\geq 90\%$)
- 94.4% of abnormal breast screenings had complete follow-up ($\geq 90\%$)
- 100% with cervical cancer diagnosis started treatment ($\geq 90\%$)
- 96.6% with breast cancer diagnosis started treatment ($\geq 90\%$)

MDE Process

- Data is collected through BreastCare Patient On-line System
- Data is run through a series of edit checks to determine what needs to be corrected or monitored closer
- Corrections are made by data manager, program nurses, care coordinators and providers prior to submission of MDE in April and October each year

What's Coming?

- Provider survey
- Ineligible letter printout feature
- Easier BreastCare card print feature
