

SUPER TOOTH SAYS...

**GIVE
TOOTH DECAY
THE ONE-TWO
PUNCH!**

TOOTH DECAY IS ONE OF THE MOST WIDESPREAD HEALTH CONDITIONS. WITH WATER FLUORIDATION AND DENTAL SEALANTS, NEARLY ALL TOOTH DECAY IN ARKANSAS CAN BE PREVENTED.

ONE!

Community Water Fluoridation

Fluoride in drinking water benefits whole communities. It is an effective, safe, and inexpensive way to prevent tooth decay for persons of all ages and income levels.

Dental Sealants

Dental sealants are thin plastic coatings applied to the chewing surfaces of back teeth. Sealants are almost 100% effective in preventing tooth decay of back teeth in children and teenagers, where decay most often occurs.

TWO!

With this **winning combination**, we are fighting for your health, your family and your healthcare costs!

For more information, call 501-661-2595 or go to www.aroralhealth.com or www.healthy.arkansas.gov.

Arkansas Department of Health

We prevent disease, promote health and protect communities.
