

# COVID-19 ADH Contact Investigation Process

1. Interview the patient to find out when they were sick and/or infectious.

2. Identify close contacts (household members and health care personnel).

3. Assess the close contacts to see if they are sick.

4. If close contacts are not sick, ADH instructs them to stay home for 14 days. ADH has daily phone calls with these individuals to check on their health.

5. If close contacts are sick, they are tested for COVID-19 if ADH decides it is needed.
