Arkansas Stroke Ready Hospital (ArSRH) Re-Designation Application

Purpose

Any facility requesting re-designation as an Arkansas Stroke Ready Hospital (ArSRH) must submit the attached Re-Designation Application to the Arkansas Department of Health (ADH) every three (3) years. Hospitals may choose to seek higher levels of stroke designation such as Primary Stroke Center (PSC) or Comprehensive Stroke Center (CSC) offered by The Joint Commission.

Of note, the initial designation as an ArSRH by the ADH is a testament of the hospital’s capacity and capability to provide the recommended stroke care based on the designation. Re-designation as an ArSRH demonstrates the quality and performance measures for optimal stroke care in addition to demonstrating capacity and capability.

Section A. ARKANSAS STROKE READY HOSPITAL RE-DESIGNATION GUIDELINES

The process to apply for and receive re-designation as an ArSRH is to be submitted as follows:

1. Application is to be submitted between sixty (60) and ninety (90) days prior to the expiration date of ArSRH designation.
2. Hospital representative completes Sections B, C, and D of this application. If any of the required measures fall below the specified ADH benchmark, a Corrective Action Plan (CAP) addressing each deficient measure must be submitted to ADH staff along with the completed re-designation application via e-mail. The CAP is a step-by-step plan to explain how performance is to be improved (NOTE: please use the CAP template provided in Section E).
   a. A CAP is needed only if any of the required measures do not meet or fall below the ADH benchmark; a CAP is not required for any of the reporting measures
3. Email completed application to Tammie.Marshall@arkansas.gov and David.Vrudny@arkansas.gov
4. The ADH re-designation team will review the application.
   a. The number of required measures that fall below the ADH benchmark will determine the re-designation process
      i. If no required measures fall below the ADH benchmark, the re-designation application will be approved
      ii. If two or fewer required measures fall below the ADH benchmark, the hospital needs to submit CAPs for each deficient measure and the re-designation application will be approved after review of CAPs
iii. If three or more required measures fall below the ADH benchmark, the hospital needs to submit CAPs for each deficient measure and a timeline to address them. The hospital needs to submit at least three (3) months of data into the Arkansas Stroke Registry and then the ADH will re-evaluate at that time.

b. Upon approval, an official letter from ADH shall be issued to the hospital extending the license term as an ArSRH for an additional three (3) years. Furthermore, the hospital will receive a certificate of designation providing proof of the ArSRH term extension.

c. If the hospital is required to re-submit a new application for re-designation due to three or more required measures having failed to meet the ADH benchmark, the ADH team will decide if re-designation is appropriate upon receipt of the new application.

i. If approved, an official letter of designation and certificate of designation will be provided to the hospital.

ii. If any data continues to fall short of the specified benchmark and the application is not approved, the ADH team will inform hospital staff and indicate what the path forward will be for re-designation at that point.

Additional information:

- On a quarterly basis (at minimum), the Arkansas Stroke Ready Hospital will create GWTG-Stroke measure reports as part of stroke care quality improvement meetings conducted with hospital staff and local EMS to evaluate performance. These measures will include the following data points part of the ADH program review process: stroke band ID, EMS Pre-notification, NIHSS, Door-to-CT time <= 25 min, Door-in-Door-Out Times at First Hospital Prior to Transfer to Acute Therapy, Time to Intravenous Thrombolytic therapy – 60 minutes, IV-tPA: Arrive by 2 Hour, Treat by 3 Hour, Early Antithrombotics, VTE prophylaxis, Anticoag for Afib/Aflutter, Smoking Cessation, LDL 100 or ND-Statin, Dysphagia Screen, Stroke Education, Rehabilitation Considered, and the CDC/COV Defect Free score. The hospital will create the most recent quarter of data available for each these measures using GWTG-Stroke and have this report ready for ADH staff to review as part of the annual stroke performance program review process.

- The Arkansas Stroke Ready Hospital Re-Designation review process does not require an on-site visit; however, the ADH reserves the right to perform site visits as needed.

- A hospital that has not received designation approval by ADH cannot represent itself as an ArSRH.

- There are two categories of data points to be recorded within Section D of application for re-designation: “required” and “reporting.” While both categories are necessary for the hospital to disclose as part of this re-designation process, only the required measures are being evaluated to determine eligibility for re-designation. Reporting measures may become required in the future.

- Any Designated Stroke Center is required to notify the ADH if other Stroke Level of Certifications are denied or suspended/revoked.

- Any ArSRH that fails to submit a Re-Designation Application every three (3) years risks suspension/revocation of its designation.

- An ArSRH’s Designation may be denied/suspended for, but not limited to, any one of the following reasons:
  a. Failure to comply with applicable sections within the Arkansas Stroke Ready Hospital’s guidelines;
  b. Failure to provide care consistent with the facility’s capability and capacity;
c. Willful preparation or filing of false stroke reports, records, or data;
d. Fraud or deceit in obtaining or attempting to obtain designation status;
e. Failure to submit stroke data to the Arkansas Stroke Registry as described in the Arkansas Stroke Registry guidelines;
f. Failure to have appropriate staff and/or equipment required for an ArSRH as described in the ArSRH guidelines, as applicable;
g. Unauthorized disclosure of stroke medical or other confidential information.

<td></td>
</tr>
</tbody>
</table>

## Required Stroke Performance Measures

1. **Pre-notification** (percent of cases of advanced notification by EMS for suspected stroke patients transported by EMS from scene).
   - ADH Benchmark: 50%

2. **Stroke Band ID** (percent of stroke patients for whom a stroke band identification number was recorded in GWTG-Stroke).
   - ADH Benchmark: 45.2%

3. **Door to CT Time <= 25 min** (percent of patients who receive brain imaging within 25 minutes of arrival).
   - ADH Benchmark: 63.8%

4. **Time to intravenous thrombolytic therapy – 60 minutes** (percent of acute ischemic stroke patients receiving (tPA) therapy during the hospital stay who have a time from hospital arrival to initiation of thrombolytic therapy administration of 60 min. or less).
   - ADH Benchmark: 44.8%

5. **IV Alteplase Arrive by 2 Hour, Treat by 3 Hour** (percent of acute ischemic stroke patients who arrive at the hospital within 2 hours of time last known well and for whom IV-tPA was initiated at the hospital within 3 hours of time last known well).
   - ADH Benchmark: 82.9%

6. **Feedback to EMS** (Does the hospital currently provide feedback to local EMS on stroke patient final diagnosis and outcome? If so, indicate frequency i.e. daily, weekly, monthly, etc. and how the feedback is provided i.e. spreadsheet, telephone call, etc.)
   - ADH Benchmark: Quarterly

7. **Community Education** (Does the hospital currently perform community outreach events specific to increase stroke awareness and/or usage of 911 when stroke is suspected? If so, indicated frequency this is done)
   - ADH Benchmark: Monthly

## Reported Stroke Performance Measures

1. **NIHSS Reported** (percent of ischemic stroke and stroke not otherwise specified patients with a score reported for NIHSS).
   - ADH Benchmark: 80%

2. **Early Antithrombotics** (Percent of patients with ischemic stroke or TIA who receive antithrombotic therapy by the end of hospital day two).
   - ADH Benchmark: 90%

3. **Door-in-Door-Out Times at First Hospital Prior to Transfer to Acute Therapy** (percent of confirmed stroke patients for whom <= 90 minutes was spent in the ED prior to transfer to a higher-level stroke center e.g. PSC, CSC, etc. for time-critical therapy).
   - ADH Benchmark: 20%
For the Arkansas Department of Health Only
