Acknowledgement
The Association would like to thank the members of the 2010-2011 Water Distribution Validation and Examination Committee for their effort in conducting the job analysis and developing the ABC Need-to-Know Criteria for Water Distribution Operators. Committee members included:

- Ray Olson, Colorado (Chair)
- Tom Ambrister, Washington
- Audrey Burchanan, Nova Scotia
- Brian Kellsey, Alberta
- Martin Nutt, Arkansas
- Kathy Weinsaft, Wyoming
- Mike Wentink, Nebraska
- Chuck Van Der Kolk, Michigan

Introduction
As part of the development of its certification exams, the Association of Boards of Certification (ABC) conducted a job analysis of water distribution operators in 2010. As part of this process, ABC conducted a national survey of distribution operators. This Need-to-Know Criteria was developed from the results of ABC’s 2010 distribution operator job analysis.

How the Need-to-Know Criteria Was Developed

Review of Task Survey
The results of the 2010 task analysis survey were provided to the ABC Distribution V&E Committee. In the task analysis survey, operators rated job tasks and capabilities for frequency of performance and seriousness of inadequate or incorrect performance. These two rating scales were used because they provide useful information (i.e., how critical each task is and how frequently each task is performed) pertaining to certification. Of the 617 individuals in the water distribution industry who completed the survey, 122 were class I operators, 151 were class II operators, 124 were class III operators, and 135 were class IV operators.

Analysis of Ratings
The composite criticality ratings and percentage of operators reporting that they performed the tasks were presented to the Distribution V&E Committee in January 2011 to begin development of the new Need-to-Know Criteria. V&E committee members were given the opportunity to retain tasks which did not meet decision criteria (a criticality value of at least 10.5 and a percent performing value of at least 50%) if a significant rationale could be provided for their importance on the examination. The V&E committee members were also given the opportunity to remove any tasks which met criteria on the survey but were deemed untestable or inappropriate for the water distribution certification examination. Final examination blueprint weights were calculated by summing the criticality values of all remaining tasks, and dividing the criticality value of each task by the grand total criticality value. Weights of individual tasks were summed for each core competency area to determine the proportion of the water distribution certification examination devoted to each core competency.
Core Competencies

The essential tasks and capabilities that were identified through this process are called the core competencies. The following pages list the core competencies for distribution operators. The core competencies are clustered into the following job duties:

- System Information/Components
- Monitor, Evaluate, and Adjust Disinfection
- Laboratory Analysis
- Install Equipment
- Operate Equipment
- Perform Maintenance
- Perform Security, Safety, and Administrative Procedures

The level of knowledge (i.e., comprehension, application, analysis) required for each task is also identified in the following pages.

- **Comprehension** is the most basic level of understanding and remembering. Items written at the comprehension level require examinees to recognize, remember, or identify important ideas.
- Items written at the **application** level require examinees to interpret, calculate, predict, use or apply information and solve problems.
- Items written at the **analysis** level require examinees to compare, contrast, diagnose, examine, analyze, and relate important concepts.

The level of knowledge is a hierarchy from basic comprehension to analysis. The level of knowledge tested is cumulative. Therefore, tasks identified as application may include questions written at both the application and comprehension levels. Tasks identified as analysis may include questions written at the comprehension, application, and analysis levels.

About the Association of Boards of Certification

Established in 1972, the Association of Boards of Certification (ABC) is a non-profit member-driven organization dedicated to protecting public health and the environment by advancing the quality and integrity of environmental certification programs. ABC membership includes almost 100 certifying authorities, representing more than 40 states, nine Canadian provinces as well as several international programs. Existing solely for its members, ABC is the voice for the profession and serves as the conduit for information in an ever-changing industry.

Over 70 certification programs currently test approximately 35,000 operators and laboratory analysts annually through ABC’s industry-leading Certification & Testing Services. Over 400,000 water and wastewater operators, laboratory analysts, and backflow prevention assembly testers have taken an ABC exam since the testing program began in 1982.

**ABC Vision**
Promote integrity in environmental certification throughout the world.

**ABC Mission**
ABC is dedicated to advancing the quality and integrity of environmental certification programs.

**ABC Objectives**
- Promote certification as a means of protecting public health, the infrastructure, and the environment.
- Promote uniformity of standards and best practices in certification.
- Serve as the technical resource for certification entities.
- Facilitate the transfer of certification between certifying authorities.
- Serve the needs of our members.
**ABC Distribution Certification Exams**

The ABC distribution certification exams evaluate an operator’s knowledge of tasks related to the operation of distribution systems. The ABC Distribution V&E Committee determined the content of each exam based on the results of the national task analysis survey. To successfully take an ABC exam, an operator must demonstrate knowledge of the core competencies in this document.

Four levels of certification exams are offered by ABC, with class I being the lowest level and class IV the highest level. The specifications for the exams are based on a weighting of the job analysis results so that they reflect the criticality of tasks performed on the job. The specifications list the percentage of questions on the exam that fall under each job duty. For example, 18% of the questions on the ABC class I distribution exam relate to the job duty “Operate Equipment.” For a list of tasks and capabilities associated with each job duty, please refer to the list of core competencies on the following pages.

### ABC Water Distribution Exam Specifications

### Required Capabilities

**Knowledge of:**
- Approved backflow methods and devices
- Biological science
- Blueprint readings
- Building codes
- Corrosion control process (including cathodic protection)
- Fire flow requirements
- Function of recordkeeping system
- General hydraulic principles
- Hydrology
- Local codes and ordinances
- Measuring instruments
- Mechanical drafting
- Operation and maintenance practices
- Pipe fittings and joining methods
- Piping material, type and size
- Potential causes of disasters in facility
- Potential impact of disasters in facility
- Regulations
- Standards
- Watershed management

**Ability to:**
- Adjust equipment
- Assess likelihood of disaster occurring
- Generate a written safety program
- Generate capital plans
- Generate long- and short-term plans
- Interpret data
- Organize information
- Perform distribution math
- Perform impact assessments
- Perform physical measurements
- Record information
- Write policies and procedures
- Review reports

- Adjust flow patterns
- Adjust system units
- Assess likelihood of disaster occurring
- Assign work to proper trade
- Calibrate equipment
- Calibrate instruments
- Demonstrate safe work habits
- Diagnose/troubleshoot equipment
- Diagnose/troubleshoot system units
- Differentiate between preventative/corrective maintenance
- Discriminate between normal/abnormal conditions
- Evaluate facility performance
- Evaluate operation of equipment
- Evaluate system units
- Identify potential safety hazards
- Inspect pumps
- Interpret data
- Interpret Material Safety Data Sheets
- Maintain inventory control system
- Maintain system in normal operating condition
- Monitor electrical equipment
- Monitor mechanical equipment
- Obtain unbiased data
- Operate safety equipment
- Organize information
Required Capabilities Continued

Knowledge of:
- Proper chemical handling and storing
- Proper lifting techniques
- Protective coatings and paints
- Quality control/quality assurance practices
- Record keeping policies
- Safety procedures
- Sanitary survey processes
- Start-up and shut down procedures
- Testing instruments
- Well-head protection

Ability to:
- Perform distribution math
- Perform general maintenance
- Perform general repairs
- Perform physical measurements
- Recognize normal and abnormal analytical results
- Recognize unsafe work conditions

**Required Capabilities**

**Knowledge of:**
- Biological science
- Blueprint readings
- Building codes
- Data acquisition techniques
- Disciplinary procedures
- Emergency plans
- Employment laws
- Facility security
- Function of recordkeeping system
- General chemistry
- General electrical principles
- General hydraulic principles
- General mechanical principles
- Human resource practices
- Hydrology
- Local codes and ordinances
- Memorandums of understanding and agreements
- Monitoring requirements
- Potential causes of disasters in facility

**Ability to:**
- Assess likelihood of disaster occurring
- Assign work to proper trade
- Communicate in writing
- Communicate verbally
- Conduct meetings
- Conduct training programs
- Coordinate emergency response with other water organizations relative to the distribution system
- Determine what information needs to be recorded
- Develop a staffing plan
- Develop a work unit
- Evaluate facility performance
- Evaluate promotional materials
- Evaluate proposals
- Follow written procedures
- Generate a written safety program
- Generate capital plans
- Generate long- and short-term plans
Required Capabilities Continued

Knowledge of:
- Potential impact of disasters in facility
- Principles of finance
- Principles of general communication
- Principles of management
- Principles of measurement
- Principles of public relations
- Principles of supervision
- Public notification requirements
- Public participation requirements
- Quality control/quality assurance practices
- Record keeping policies
- Regulations
- Reporting requirements
- Risk management
- Safe Drinking Water Act (SDWA)
- Sanitary spring design
- Sanitary survey processes
- Standards
- Water reuse
- Watershed management
- 40 CFR 141 Subpart A: General (definitions, coverage, variances and exemptions, siting requirements, and effective dates)
- 40 CFR 141 Subpart D: Reporting and Recordkeeping Requirements
- 40 CFR 141 Subpart O: Consumer Confidence Reports
- 40 CFR 141 Subpart Q: Public Notification of Drinking Water Violations

Ability to:
- Identify potential safety hazards
- Interpret data
- Negotiate contracts
- Obtain unbiased data
- Organize information
- Perform distribution math
- Perform impact assessments
- Prepare proposals
- Recognize normal and abnormal analytical results
- Recognize unsafe work conditions
- Record information
- Review reports
- Select safety equipment
- Transcribe data
- Translate technical language into common terminology
- Write policies and procedures

Alkalinity, as mg CaCO₃/L = \frac{(\text{Titrant Volume, mL})(\text{Acid Normality})(50,000)}{\text{Sample Volume, mL}}

Amps = \frac{\text{Volts}}{\text{Ohms}}

*Area of Circle = (0.785) (Diameter²) = (\pi) (Radius²)

Area of Cone (lateral area) = (\pi) (Radius) \sqrt{\text{Radius}^2 + \text{Height}^2}

Area of Cone (total surface area) = (\pi) (Radius) (Radius + \sqrt{\text{Radius}^2 + \text{Height}^2})

Area of Cylinder (total exterior surface area) = [\text{Surface Area of End #1}] + [\text{Surface Area of End #2}] + [(\pi) (\text{Diameter}) (\text{Height or Depth})]

*Area of Rectangle = (\text{Length}) (\text{Width})

*Area of a Right Triangle = \frac{(\text{Base})(\text{Height})}{2}

Average (arithmetic mean) = \frac{\text{Sum of All Terms}}{\text{Number of Terms}}

Average (geometric mean) = \left[(X_1)(X_2)(X_3)(X_4)\ldots(X_n)\right]^{1/n} = \text{The n-th root of the product of n numbers}

Chemical Dry Feeder Calibration, lbs/day = \frac{\text{(Dry Chemical Collected, grams)}(60 \text{ min/hr})(24 \text{ hr/day})}{(454 \text{ grams/lb})(\text{Time, min})}

Chemical Feed Pump Setting, % Stroke = \frac{\text{Desired Flow}}{\text{Maximum Flow}} \times 100\%

Chemical Feed Pump Setting, mL/min = \frac{\text{(Flow, MGD)}(\text{Dose, mg/L})(3.785 \text{ L/gal})(1,000,000 \text{ gal/MG})}{(\text{Liquid, mg/mL})(24 \text{ hr/day})(60 \text{ min/hr})}

Circumference of Circle = (\pi)(\text{Diameter}) = 2(\pi)(\text{Radius})

Composite Sample Single Portion = \frac{\text{Instantaneous Flow})(\text{Total Sample Volume})}{\text{(Number of Portions)(Average Flow)}}

CT Calculation = (\text{Disinfectant Residual Concentration, mg/L})(\text{Time, min})

Degrees Celsius = (\text{Degrees Fahrenheit} - 32) \left(\frac{5}{9}\right) = \frac{(\circ F - 32)}{1.8}
Degrees Fahrenheit = (Degrees Celsius) \(\left(\frac{9}{5}\right) + 32\)

= (Degrees Celsius) (1.8) + 32

Detention Time = \(\frac{\text{Volume}}{\text{Flow}}\)  
*Units must be compatible*

*Electromotive Force (EMF), volts = (Current, amps) (Resistance, ohms)  or  \(E = IR\)

*Feed Rate, lbs/day = \(\frac{(\text{Dosage, mg/L})(\text{Capacity, MGD})(8.34 \text{ lbs/gal})}{\text{Purity, % expressed as a decimal}}\)

Feed Rate, gal/min (Fluoride Saturator) = \(\frac{(\text{Plant capacity, gpm})(\text{Dosage, mg/L})}{18,000 \text{ mg/L}}\)

Feed Rate, lbs/day (Fluoride) = \(\frac{(\text{Dosage, mg/L})(\text{Capacity, MGD})(8.34 \text{ lbs/gal})}{(\text{Available Fluoride Ion, % expressed as a decimal})(\text{Purity, % expressed as a decimal})}\)

Filter Backwash Rise Rate, in/min = \(\frac{(\text{Backwash Rate, gpm/ft}^2)(12 \text{ in/ft})}{7.48 \text{ gal/ft}^3}\)

Filter Drop Test Velocity, ft/min = \(\frac{\text{Water Drop, ft}}{\text{Time of Drop, min}}\)

Filter Flow Rate or Backwash Rate, gpm/ft\(^2\) = \(\frac{\text{Flow, gpm}}{\text{Filter Area, ft}^2}\)

Filter Yield, lbs/hr/ft\(^2\) = \(\frac{(\text{Solids Loading, lbs/day})(\text{Recovery, % expressed as a decimal})}{(\text{Filter Operation, hr/day})(\text{Area, ft}^2)}\)

*Flow Rate, cfs = (Area, ft\(^2\)) (Velocity, ft/sec)  or  \(Q = AV\)  *Units must be compatible*

*Force, lbs = (Pressure, psi) (Area, in\(^2\))

Gallons/Capita/Day = \(\frac{\text{Volume of Water Produced, gpd}}{\text{Population}}\)

Hardness, as mg CaCO\(_3\)/L = \(\frac{(\text{Titrant Volume, mL})(1,000)}{\text{Sample Volume, mL}}\)  
*Only when the titration factor is 1.00 of EDTA*

Horsepower, Brake (bhp) = \(\frac{(\text{Flow, gpm})(\text{Head, ft})}{(3,960)(\text{Pump Efficiency, % expressed as a decimal})}\)

Horsepower, Motor (mhp) = \(\frac{(\text{Flow, gpm})(\text{Head, ft})}{(3,960)(\text{Pump Efficiency, % expressed as a decimal})(\text{Motor Efficiency, % expressed as a decimal})}\)

*Horsepower, Water (whp) = \(\frac{(\text{Flow, gpm})(\text{Head, ft})}{3,960}\)

Hydraulic Loading Rate, gpd/ft\(^2\) = \(\frac{\text{Total Flow Applied, gpd}}{\text{Area, ft}^2}\)
Hypochlorite Strength, % = \frac{\text{Chlorine Required, lbs}}{\text{(Hypochlorite Solution Needed, gal) (8.34 lbs/gal)}} \times 100\% \\

Leakage, gpd = \frac{\text{Volume, gallons}}{\text{Time, days}} \\

*Mass, lbs = (\text{Volume, MG}) (\text{Concentration, mg/L})(8.34 \text{ lbs/gal}) \\
*Mass Flux, lbs/day = (\text{Flow, MGD}) (\text{Concentration, mg/L}) (8.34 \text{ lbs/gal}) \\

Milliequivalent = (\text{mL})(\text{Normality}) \\

Molarity = \frac{\text{Moles of Solute}}{\text{Liters of Solution}} \\

Normality = \frac{\text{Number of Equivalent Weights of Solute}}{\text{Liters of Solution}} \\

Number of Equivalent Weights = \frac{\text{Total Weight}}{\text{Equivalent Weight}} \\

Number of Moles = \frac{\text{Total Weight}}{\text{Molecular Weight}} \\

Reduction in Flow, % = \left(\frac{\text{Original Flow} - \text{Reduced Flow}}{\text{Original Flow}}\right) \times 100\% \\

Removal, % = \left(\frac{\text{In} - \text{Out}}{\text{In}}\right) \times 100\% \\

Slope, % = \frac{\text{Drop or Rise}}{\text{Distance}} \times 100\% \\

Solids, mg/L = \frac{(\text{Dry Solids, grams})(1,000,000)}{\text{Sample Volume, mL}} \\

Solids Concentration, mg/L = \frac{\text{Weight, mg}}{\text{Volume, L}} \\

Specific Gravity = \frac{\text{Specific Weight of Substance, lbs/gal}}{\text{Specific Weight of Water, lbs/gal}} \\

Surface Loading Rate or Surface Overflow Rate, gpd/ft^2 = \frac{\text{Flow, gpd}}{\text{Area, ft}^2} \\

Three Normal Equation = (N_1 \times V_1) + (N_2 \times V_2) = (N_3 \times V_3) \quad \text{Where } V_1 + V_2 = V_3 \\

Two Normal Equation = N_1 \times V_1 = N_2 \times V_2 \quad \text{Where } N = \text{normality, } V = \text{volume or flow} \\

Velocity, ft/sec = \frac{\text{Flow Rate, ft}^3/\text{sec}}{\text{Area, ft}^2} = \frac{\text{Distance, ft}}{\text{Time, sec}} \\

*Volume of Cone = (1/3) (.785) (\text{Diameter}^2)(\text{Height}) = (1/3) [(\pi)(\text{Radius}^2)(\text{Height})]
*Volume of Cylinder = (.785) (Diameter²) (Height)
   = (π) (Radius²) (Height)

*Volume of Rectangular Tank = (Length) (Width) (Height)

Watts (AC circuit) = (Volts) (Amps) (Power Factor)
Watts (DC circuit) = (Volts) (Amps)

Weir Overflow Rate, gpd/ft = \( \frac{\text{Flow, gpd}}{\text{Weir Length, ft}} \)

Wire-to-Water Efficiency, % = \( \frac{\text{Water Horsepower, hp}}{\text{Power Input, hp or Motor hp}} \times 100\% \)

Wire-to-Water Efficiency, % = \( \frac{(\text{Flow, gpm})(\text{Total Dynamic Head, ft})(0.746 \text{ kW/hp})}{(3,960)(\text{Electrical Demand, kilowatts})} \times 100\% \)

**Abbreviations:**
- cfs: cubic feet per second
- DO: dissolved oxygen
- ft: feet
- g: grams
- gpd: gallons per day
- gpg: grains per gallon
- gpm: gallons per minute
- hp: horsepower
- hr: hour
- in: inches
- kW: kilowatt
- lbs: pounds
- mg/L: milligrams per liter
- MGD: million gallons per day
- mL: milliliter
- min: minute
- ppb: parts per billion
- ppm: parts per million
- psi: pounds per square inch
- Q: flow
- SS: settleable solids
- TTHM: total trihalomethanes
- TOC: total organic carbon
- TSS: total suspended solids
- VS: volatile solids

**Conversion Factors:**
- 1 acre = 43,560 square feet
- 1 acre foot = 326,000 gallons
- 1 cubic foot = 7.48 gallons
- = 62.4 pounds
- 1 cubic foot per second = 0.646 MGD
- 1 foot = 0.305 meters
- 1 foot of water = 0.433 psi
- 1 gallon = 3.79 liters
- = 8.34 pounds
- 1 grain per gallon = 17.1 mg/L
- 1 horsepower = 0.746 kW
- = 746 watts
- = 33,000 ft lbs/min
- 1 mile = 5,280 feet
- 1 million gallons per day = 694 gallons per minute
- = 1.55 cubic feet per second (cfs)
- 1 pound = 0.454 kilograms
- 1 pound per square inch = 2.31 feet of water
- 1 ton = 2,000 pounds
- 1% = 10,000 mg/L
- π or pi = 3.14159

**Alkalinity Relationships:**

Key: P – phenolphthalein alkalinity  T – total alkalinity
*Pie Wheels:*
- To find the quantity above the horizontal line: multiply the pie wedges below the line together.
- To solve for one of the pie wedges below the horizontal line: cover that pie wedge, then divide the remaining pie wedge(s) into the quantity above the horizontal line.

*Given units must match the units shown in the pie wheel.*
The key to studying for the math portion of the license exam begins with the formula sheet. The formula sheet should serve as a guide to the type of questions that will be encountered on the exams. By using the formula sheet and the California text practice questions, a better understanding of the required math should be made more apparent.

The following is a list of math categories that relate to the formula sheet. Examples of some problems have been noted for study. The examples shown do not depict the only application that each formula may be used. These examples can be utilized to see how some formulas are executed. All formulas and examples may not be included. You may also find other examples of problems on your own.

In the “EXAMPLE” Column of the table below, “A” denotes sample problems located in the Arithmetic Appendix and “Ch” denotes chapter of the treatment books. The numbers are the chapter and/or section of that part of the treatment books.
